List of Figures	xi
Preface	xiii
Acknowledgments	xix
1 Statistical Inference	1
1.1 What statistical inference is all about	1
1.2 Why statistical inference is difficult	2
1.3 What kind of parameters are we interested in?	3
1.3.1 Center of a distribution	4
1.3.2 Spread of a distribution	5
1.3.3 Association between variables	6
1.4 Statistics and probability	8
1.5 Chapter summary	9
2 Theory and Calculus of Probability	11
2.1 Probability models	11
2.2 Random variables and their distributions	15
2.3 Moments of random variables	19
2.3.1 Expectation	19
2.3.2 Higher order moments	21
2.3.3 Variance	22
2.4 Multivariate distributions	23
2.4.1 Association between two random variables	24
2.5 Normal distribution	25
2.5.1 Bivariate normal distribution	27
2.6 Limit theorems for the sample mean	28
2.7 Chapter summary	32
2.8 Exercises and problems	32
3 From Probability to Statistics	39
3.1 A first stab at statistical inference	40
3.2 Sampling distributions	42
3.3 Chapter summary	43
3.4 Exercises and problems	44

4	Statistical Inference for the Mean based on a Large Sample	47
4.1	Simple statistical model for the mean	47
4.2	Confidence intervals	49
4.3	Hypothesis tests	51
4.3.1	The p -value	52
4.3.2	Errors and power	54
4.4	Chapter summary	57
4.5	Exercises and problems	57
5	Statistical Models and Sampling Distributions	61
5.1	Statistical models	61
5.2	Some examples of statistical models	64
5.3	Statistics	65
5.4	Sampling distributions	68
5.5	Chapter summary	72
5.6	Exercises and problems	72
6	Estimation of Parameters	77
6.1	Introduction	77
6.2	Maximum likelihood estimators	77
6.3	Comparing estimators	82
6.3.1	Unbiased estimators	82
6.3.2	Mean squared error	86
6.4	Method of moments	90
6.5	A useful asymptotic result	92
6.6	Chapter summary	93
6.7	Exercises and problems	94
7	Confidence Intervals	99
7.1	Introduction	99
7.2	Basic idea	99
7.3	Confidence intervals for means	102
7.3.1	Mean of a normal population with variance known	102
7.3.2	Mean of a normal population with variance unknown	103
7.3.3	Mean of an unknown distribution based on a large sample	104
7.4	Confidence interval for any parameter based on a large sample	105
7.5	Differences between populations based on large samples	106
7.5.1	Difference between population means	106
7.5.2	Difference between proportions	107
7.6	Confidence intervals for the variance of a normal sample	108
7.7	Chapter summary	110
7.8	Exercises and problems	110

8 Hypothesis Testing	117
8.1 Introduction	117
8.2 Hypotheses, decisions, and errors	117
8.3 What test statistic should we use?	122
8.4 Examples of commonly used tests	126
8.4.1 Test of a normal mean with known variance	127
8.4.2 Test of a normal mean with unknown variance	128
8.4.3 Test of a mean based on a large sample	130
8.4.4 Test of a proportion based on a large sample	130
8.4.5 Test of the difference between two means based on a large sample	131
8.4.6 Test of the difference between two proportions in a large sample	132
8.5 p -value	133
8.6 Statistical significance	134
8.7 Chapter summary	136
8.8 Exercises, problems, and discussion	137
9 Linear Regression	145
9.1 Basic ideas	145
9.2 Estimation: Least squares method	148
9.3 Decomposition of errors	150
9.4 Inferences based on the OLS estimator	151
9.5 Linear regression, causation, and correlation	153
9.6 Chapter summary	154
9.7 Exercises, problems, and discussion	155
10 Bayesian Inference	161
10.1 Introduction	161
10.2 Basic concepts	162
10.3 A simple statistical model from a Bayesian perspective	164
10.4 Highest density regions	166
10.5 Hypothesis testing	167
10.6 Evidence and the likelihood principle	170
10.7 Decision theory	173
10.8 An economic decision problem with statistical information	177
10.9 Linear regression	179
10.10 Chapter summary	180
10.11 Exercises and problems	180
Appendices	183
A Commonly used discrete distributions	185
B Commonly used continuous distributions	187

C Special distributions	189
C.1 χ^2 distribution	189
C.2 Student's t -distribution	189
C.3 F -distribution	190
D The Greek alphabet	191
E Mathematical notation	193
F Summation and product notation	195
G Exponentials and (natural) logarithms	199
H Subjective probability	201
References	205
Index	207
