PART I BASES OF CAUSALITY

1

1 Causation and the Aims of Inquiry

3

Ned Hall

- 1.1 Introduction, 3
- 1.2 The Aim of an Account of Causation, 4
 - 1.2.1 The Possible Utility of a False Account, 4
 - 1.2.2 Inquiry's Aim, 5
 - 1.2.3 Role of "Intuitions", 6
- 1.3 The Good News, 7
 - 1.3.1 The Core Idea, 7
 - 1.3.2 Taxonomizing "Conditions", 9
 - 1.3.3 Unpacking "Dependence", 10
 - 1.3.4 The Good News, Amplified, 12
- 1.4 The Challenging News, 17
 - 1.4.1 Multiple Realizability, 17
 - 1.4.2 Protracted Causes, 18
 - 1.4.3 Higher Level Taxonomies and "Normal" Conditions, 25

1.5	The Perplexing News, 26	
1.5.1	The Centrality of "Causal Process", 26	
1.5.2	A Speculative Proposal, 28	
2	Evidence and Epistemic Causality	31
	<i>Michael Wilde & Jon Williamson</i>	
2.1	Causality and Evidence, 31	
2.2	The Epistemic Theory of Causality, 35	
2.3	The Nature of Evidence, 38	
2.4	Conclusion, 40	
PART II	DIRECTIONALITY OF EFFECTS	43
3	Statistical Inference for Direction of Dependence in Linear Models	45
	<i>Yadolah Dodge & Valentin Rousson</i>	
3.1	Introduction, 45	
3.2	Choosing the Direction of a Regression Line, 46	
3.3	Significance Testing for the Direction of a Regression Line, 48	
3.4	Lurking Variables and Causality, 54	
3.4.1	Two Independent Predictors, 55	
3.4.2	Confounding Variable, 55	
3.4.3	Selection of a Subpopulation, 56	
3.5	Brain and Body Data Revisited, 57	
3.6	Conclusions, 60	
4	Directionality of Effects in Causal Mediation Analysis	63
	<i>Wolfgang Wiedermann & Alexander von Eye</i>	
4.1	Introduction, 63	
4.2	Elements of Causal Mediation Analysis, 66	
4.3	Directionality of Effects in Mediation Models, 68	
4.4	Testing Directionality Using Independence Properties of Competing Mediation Models, 71	
4.4.1	Independence Properties of Bivariate Relations, 72	
4.4.2	Independence Properties of the Multiple Variable Model, 74	
4.4.3	Measuring and Testing Independence, 74	
4.5	Simulating the Performance of Directionality Tests, 82	
4.5.1	Results, 83	
4.6	Empirical Data Example: Development of Numerical Cognition, 85	
4.7	Discussion, 92	

5	Direction of Effects in Categorical Variables: A Structural Perspective	107
	<i>Alexander von Eye & Wolfgang Wiedermann</i>	
5.1	Introduction, 107	
5.2	Concepts of Independence in Categorical Data Analysis, 108	
5.3	Direction Dependence in Bivariate Settings: Metric and Categorical Variables, 110	
5.3.1	Simulating the Performance of Nonhierarchical Log-Linear Models, 114	
5.4	Explaining the Structure of Cross-Classifications, 117	
5.5	Data Example, 123	
5.6	Discussion, 126	
6	Directional Dependence Analysis Using Skew-Normal Copula-Based Regression	131
	<i>Seongyong Kim & Daeyoung Kim</i>	
6.1	Introduction, 131	
6.2	Copula-Based Regression, 133	
6.2.1	Copula, 133	
6.2.2	Copula-Based Regression, 134	
6.3	Directional Dependence in the Copula-Based Regression, 136	
6.4	Skew-Normal Copula, 138	
6.5	Inference of Directional Dependence Using Skew-Normal Copula-Based Regression, 144	
6.5.1	Estimation of Copula-Based Regression, 144	
6.5.2	Detection of Directional Dependence and Computation of the Directional Dependence Measures, 146	
6.6	Application, 147	
6.7	Conclusion, 150	
7	Non-Gaussian Structural Equation Models for Causal Discovery	153
	<i>Shohei Shimizu</i>	
7.1	Introduction, 153	
7.2	Independent Component Analysis, 156	
7.2.1	Model, 157	
7.2.2	Identifiability, 157	
7.2.3	Estimation, 158	
7.3	Basic Linear Non-Gaussian Acyclic Model, 158	
7.3.1	Model, 158	
7.3.2	Identifiability, 160	
7.3.3	Estimation, 162	
7.4	LINGAM for Time Series, 167	
7.4.1	Model, 167	

7.4.2	Identifiability, 168	
7.4.3	Estimation, 168	
7.5	LINGAM with Latent Common Causes, 169	
7.5.1	Model, 169	
7.5.2	Identifiability, 171	
7.5.3	Estimation, 174	
7.6	Conclusion and Future Directions, 177	
8	Nonlinear Functional Causal Models for Distinguishing Cause from Effect	185
	<i>Kun Zhang & Aapo Hyvärinen</i>	
8.1	Introduction, 185	
8.2	Nonlinear Additive Noise Model, 188	
8.2.1	Definition of Model, 188	
8.2.2	Likelihood Ratio for Nonlinear Additive Models, 188	
8.2.3	Information-Theoretic Interpretation, 189	
8.2.4	Likelihood Ratio and Independence-Based Methods, 191	
8.3	Post-Nonlinear Causal Model, 192	
8.3.1	The Model, 192	
8.3.2	Identifiability of Causal Direction, 193	
8.3.3	Determination of Causal Direction Based on the PNL Causal Model, 193	
8.4	On the Relationships Between Different Principles for Model Estimation, 194	
8.5	Remark on General Nonlinear Causal Models, 196	
8.6	Some Empirical Results, 197	
8.7	Discussion and Conclusion, 198	
PART III	GRANGER CAUSALITY AND LONGITUDINAL DATA MODELING	203
9	Alternative Forms of Granger Causality, Heterogeneity, and Nonstationarity	205
	<i>Peter C. M. Molenaar & Lawrence L. Lo</i>	
9.1	Introduction, 205	
9.2	Some Initial Remarks on the Logic of Granger Causality Testing, 206	
9.3	Preliminary Introduction to Time Series Analysis, 207	
9.4	Overview of Granger Causality Testing in the Time Domain, 210	
9.5	Granger Causality Testing in the Frequency Domain, 212	
9.5.1	Two Equivalent Representations of a VAR(a), 212	
9.5.2	Partial Directed Coherence (PDC) as a Frequency-Domain Index of Granger Causality, 213	
9.5.3	Some Preliminary Comments, 214	

9.5.4	Application to Simulated Data, 215	
9.6	A New Data-Driven Solution to Granger Causality Testing, 216	
9.6.1	Fitting a uSEM, 217	
9.6.2	Extending the Fit of a uSEM, 217	
9.6.3	Application of the Hybrid VAR Fit to Simulated Data, 218	
9.7	Extensions to Nonstationary Series and Heterogeneous Replications, 221	
9.7.1	Heterogeneous Replications, 221	
9.7.2	Nonstationary Series, 222	
9.8	Discussion and Conclusion, 224	
10	Granger Meets Rasch: Investigating Granger Causation with Multidimensional Longitudinal Item Response Models	231
	<i>Ingrid Koller, Claus H. Carstensen, Wolfgang Wiedermann & Alexander von Eye</i>	
10.1	Introduction, 231	
10.2	Granger Causation, 232	
10.3	The Rasch Model, 234	
10.4	Longitudinal Item Response Theory Models, 236	
10.5	Data Example: Scientific Literacy in Preschool Children, 240	
10.6	Discussion, 241	
11	Granger Causality for Ill-Posed Problems: Ideas, Methods, and Application in Life Sciences	249
	<i>Kateřina Hlaváčková-Schindler, Valeriya Naumova & Sergiy Pereverzyev Jr.</i>	
11.1	Introduction, 249	
11.1.1	Causality Problems in Life Sciences, 250	
11.1.2	Outline of the Chapter, 250	
11.1.3	Notation, 251	
11.2	Granger Causality and Multivariate Granger Causality, 251	
11.2.1	Granger Causality, 252	
11.2.2	Multivariate Granger Causality, 253	
11.3	Gene Regulatory Networks, 254	
11.4	Regularization of Ill-Posed Inverse Problems, 255	
11.5	Multivariate Granger Causality Approaches Using ℓ_1 and ℓ_2 Penalties, 256	
11.6	Applied Quality Measures, 262	
11.7	Novel Regularization Techniques with a Case Study of Gene Regulatory Networks Reconstruction, 263	
11.7.1	Optimal Graphical Lasso Granger Estimator, 263	
11.7.2	Thresholding Strategy, 264	
11.7.3	An Automatic Realization of the GLG-Method, 266	
11.7.4	Granger Causality with Multi-Penalty Regularization, 266	

11.7.5	Case Study of Gene Regulatory Network Reconstruction,	269
11.8	Conclusion,	271
12	Unmeasured Reciprocal Interactions: Specification and Fit Using Structural Equation Models	277
	<i>Phillip K. Wood</i>	
12.1	Introduction,	277
12.2	Types of Reciprocal Relationship Models,	278
12.2.1	Cross-Lagged Panel Approaches,	278
12.2.2	Granger Causality,	279
12.2.3	Epistemic Causality,	280
12.2.4	Reciprocal Causality,	281
12.3	Unmeasured Reciprocal and Autocausal Effects,	286
12.3.1	Bias in Standardized Regression Weight,	288
12.3.2	Autocausal Effects,	289
12.3.3	Instrumental Variables,	291
12.4	Longitudinal Data Settings,	293
12.4.1	Monte Carlo Simulation,	293
12.4.2	Real-World Data Examples,	302
12.5	Discussion,	304
PART IV	COUNTERFACTUAL APPROACHES AND PROPENSITY SCORE ANALYSIS	309
13	Log-Linear Causal Analysis of Cross-Classified Categorical Data	311
	<i>Kazuo Yamaguchi</i>	
13.1	Introduction,	311
13.2	Propensity Score Methods and the Collapsibility Problem for the Logit Model,	313
13.3	Theorem On Standardization and the Lack of Collapsibility of the Logit Model,	316
13.4	The Problem of Zero-Sample Estimates of Conditional Probabilities and the Use of Semiparametric Models to Solve the Problem,	318
13.4.1	The Problem of Zero-Sample Estimates of Conditional Probabilities,	318
13.4.2	Method for Obtaining Adjusted Two-Way Frequency Data for the Analysis of Association between X and Y ,	319
13.4.3	Method for Obtaining an Adjusted Three-Way Frequency Table for the Analysis of Conditional Association,	320
13.5	Estimation of Standard Errors in the Analysis of Association with Adjusted Contingency Table Data,	322
13.6	Illustrative Application,	323
13.6.1	Data,	323

13.6.2	Software,	324
13.6.3	Analysis,	324
13.7	Conclusion,	326
14	Design- and Model-Based Analysis of Propensity Score Designs	333
	<i>Peter M. Steiner</i>	
14.1	Introduction,	333
14.2	Causal Models and Causal Estimands,	334
14.3	Design- and Model-Based Inference with Randomized Experiments,	336
14.3.1	Design-Based Formulation,	337
14.3.2	Model-Based Formulation,	338
14.4	Design- and Model-Based Inferences with PS Designs,	339
14.4.1	Propensity Score Designs,	340
14.4.2	Design- versus Model-Based Formulations of PS Designs,	344
14.4.3	Other Propensity Score Techniques,	346
14.5	Statistical Issues with PS Designs in Practice,	347
14.5.1	Choice of a Specific PS Design,	347
14.5.2	Estimation of Propensity Scores,	350
14.5.3	Estimating and Testing the Treatment Effect,	353
14.6	Discussion,	355
15	Adjustment when Covariates are Fallible	363
	<i>Steffi Pohl, Marie-Ann Sengewald & Rolf Steyer</i>	
15.1	Introduction,	363
15.2	Theoretical Framework,	364
15.2.1	Definition of Causal Effects,	365
15.2.2	Identification of Causal Effects,	366
15.2.3	Adjusting for Latent or Fallible Covariates,	367
15.3	The Impact of Measurement Error in Covariates on Causal Effect Estimation,	369
15.3.1	Theoretical Impact of One Fallible Covariate,	369
15.3.2	Investigation of the Impact of Fallible Covariates in Simulation Studies,	370
15.3.3	Investigation of the Impact of Fallible Covariates in an Empirical Study,	370
15.4	Approaches Accounting for Latent Covariates,	372
15.4.1	Latent Covariates in Propensity Score Methods,	373
15.4.2	Latent Covariates in ANCOVA Models,	374
15.4.3	Performance of the Approaches in an Empirical Study,	374
15.5	The Impact of Additional Covariates on the Biasing Effect of a Fallible Covariate,	375
15.5.1	Investigation of the Impact of Additional Covariates in an Empirical Study,	376

15.5.2	Investigation of the Impact of Additional Covariates in Simulation Studies, 378	
15.6	Discussion, 379	
16	Latent Class Analysis with Causal Inference: The Effect of Adolescent Depression on Young Adult Substance Use Profile	385
	<i>Stephanie T. Lanza, Megan S. Schuler & Bethany C. Bray</i>	
16.1	Introduction, 385	
16.2	Latent Class Analysis, 387	
16.2.1	LCA With Covariates, 387	
16.3	Propensity Score Analysis, 389	
16.3.1	Inverse Propensity Weights (IPWs), 390	
16.4	Empirical Demonstration, 391	
16.4.1	The Causal Question: A Moderated Average Causal Effect, 391	
16.4.2	Participants, 391	
16.4.3	Measures, 391	
16.4.4	Analytic Strategy for LCA With Causal Inference, 394	
16.4.5	Results From Empirical Demonstration, 394	
16.5	Discussion, 398	
16.5.1	Limitations, 399	
PART V	DESIGNS FOR CAUSAL INFERENCE	405
17	Can We Establish Causality with Statistical Analyses? The Example of Epidemiology	407
	<i>Ulrich Frick & Jürgen Rehm</i>	
17.1	Why a Chapter on Design?, 407	
17.2	The Epidemiological Theory of Causality, 408	
17.3	Cohort and Case-Control Studies, 411	
17.4	Improving Control in Epidemiological Research, 414	
17.4.1	Measurement, 414	
17.4.2	Mendelian Randomization, 416	
17.4.3	Surrogate Endpoints (Experimental), 419	
17.4.4	Other Design Measures to Increase Control, 420	
17.4.5	Methods of Analysis, 421	
17.5	Conclusion: Control in Epidemiological Research Can Be Improved, 424
