

Contents

1	Introduction: Prospects for a Conceptual Synthesis	1
1.1	Organizing Life	2
1.2	Microorganisms and Macroorganisms: Differences and Similarities	7
1.3	The Centrality of Natural Selection	9
1.3.1	Constraints on Natural Selection: Phylogenetic, Ontogenetic, and Allometric	11
1.4	Analogies, Homologies, and Homoplasies	13
1.5	A Framework for Comparisons	13
1.5.1	Competing Demands, Trade-Offs, and Resource Allocation	13
1.6	What Is an Individual?	18
1.7	Summary	22
	Suggested Additional Reading	23
2	Genetic Variation	25
2.1	Introduction	26
2.2	Mechanisms	27
2.2.1	Mutation	27
2.2.2	Recombination	33
2.2.3	Genomic Plasticity	37
2.2.4	Epigenetics and Gene Regulation	37
2.3	Sex and Meiotic Recombination	39
2.3.1	Definitions, Origin, and Maintenance	39
2.3.2	Sex and Adaptive Evolution in Prokaryotes	42
2.3.3	Sex and Adaptive Evolution in Some Simple Eukaryotes: The Fungi	52
2.4	The Asexual Lifestyle	58
2.5	Somatic Variation, Heritable Variation, and the Concept of the Genet	62
2.6	Summary	65
	Suggested Additional Reading	67
3	Nutritional Mode	69
3.1	Introduction	70
3.1.1	Some General Principles and Ground Rules	70
3.2	Carbon and Energy as Resources	72
3.2.1	Microorganisms and Trophic Structure	76
3.2.2	Resources and Biogeography	79
3.3	Resource Acquisition	82
3.3.1	Optimal Foraging Theory	82
3.4	Nutritional Versatility	92
3.4.1	Versatility as the Ability to Do Many Things	92
3.4.2	Versatility as the Ability to Adjust Rapidly	94
3.5	Generalists and Specialists	97

3.5.1	The Phylogeny of Specialization.....	103
3.6	Summary	105
	Suggested Additional Reading.....	107
4	Size	109
4.1	Introduction	110
4.2	Changes in Size and Development of Life on Earth	112
4.2.1	Origins, Geobiochemistry, and Phylogenetic Benchmarks.....	112
4.2.2	From Unicell to Multicell; Microorganism to Macroorganism.....	115
4.3	On Seeing the World as an Elephant or a Mycoplasma	125
4.3.1	Lower Limits and Upper Limits on Cell and Organism Size.....	125
4.3.2	The Organism as Geometrician.....	127
4.3.3	Movement in a Fluid.....	132
4.4	Some Correlates of Size	134
4.4.1	Complexity	134
4.4.2	Chronological Versus Physiological (Metabolic) Time	138
4.4.3	Density Relationships: Body Size and Numbers of Species and of Individuals	139
4.5	Some Ecological Consequences of Size	142
4.5.1	Benefits and Costs.....	142
4.6	Size and Life History Theory	146
4.6.1	Size of Dispersal Units	146
4.6.2	Microorganisms are Not Necessarily <i>r</i> -Strategists.....	148
4.7	Summary	154
	Suggested Additional Reading.....	156
5	Growth and Growth Form	159
5.1	Introduction	160
5.2	Unitary and Modular Organisms: An Overview	160
5.2.1	Design of the Unitary Organism.....	160
5.2.2	Design of the Modular Organism.....	161
5.3	Fungi as Modular Organisms	165
5.4	Bacteria as Modular Organisms	167
5.5	Life Histories of Modular Versus Unitary Organisms	168
5.5.1	Growth of the Individual and Size of Populations.....	168
5.5.2	Phenotypic Plasticity and Somatic Polymorphism	169
5.5.3	Longevity, 'Potential Immortality', and Somatic Mutation	171
5.5.4	Occupation of Space and Capture of Resources	175
5.5.5	When Should a Clonal, Modular Organism Divide?	184
5.5.6	Competition or Complementation?.....	186
5.6	Summary	193
	Suggested Additional Reading.....	194
6	The Life Cycle	197
6.1	Introduction	198
6.2	Origins and General Considerations	198
6.2.1	Alternation of Generations.....	200

6.2.2	The Centrality of a Single-Cell Stage	203
6.2.3	Phylogenetic Constraint	205
6.3	Complex Life Cycles	206
6.3.1	Concept and Definition	206
6.3.2	The Rust Fungi: Extreme Specialists with a Complex Life Cycle	209
6.3.3	Optimization and Constraint in Molding Life Cycles	213
6.4	Senescence	215
6.4.1	Some Demographic Considerations	215
6.4.2	Evidence for Senescence Among Macroorganisms	220
6.4.3	Evidence for Senescence Among Microorganisms	226
6.4.4	Non-evolutionary and Evolutionary Interpretations	230
6.5	Summary	238
	Suggested Additional Reading	239
7	The Environment	241
7.1	Introduction	242
7.2	The Environment and Organism Are Tightly Coupled	243
7.3	How Organisms Experience Environments	247
7.3.1	The Influence of Life Span and Growth Form	247
7.3.2	The Concept of Environmental Grain	249
7.4	Organism Size and Environmental Variation	251
7.5	Genotypic and Phenotypic Variation	254
7.5.1	Genetic Differentiation	255
7.5.2	Phenotypic Variation	256
7.6	The Environment and Life Cycle Changes	265
7.6.1	Pauses: Dormancy	265
7.6.2	Epigenetics, Bistability, Noise, and Development	269
7.7	Habitable Sites and the Evolution of Dispersal	272
7.8	Summary	279
	Suggested Additional Reading	281
8	Conclusion: Commonalities and Differences in Life Histories	283
8.1	Levels of Comparison	284
8.2	On Being a Macroorganism or a Microorganism	286
8.3	Natural Selection as the Common Denominator	286
8.3.1	The Principle of Trade-Offs as a Universal Currency	287
8.3.2	Growth Form as the Integrator of Life Histories Across Size Categories	288
8.4	Recapitulation of Some Major Points	289
8.5	On the Comparative Ecology of Microorganisms and Macroorganisms	292
8.6	Summary	296
	Literature Cited	299
	Index	339
