Preface	vii
Goals	ix
SECTION I CARDIAC ELECTROPHYSIOLOGY AND THE ELECTROCARDIOGRAM (ECG)	1
1 Ventricular myocyte electrophysiology	3
Resting potential	3
Action potential	5
2 Cardiac electrical activity elsewhere than in ventricular muscle cells	9
Sinoatrial (SA) node	9
Atrial myocytes	11
Atrioventricular (AV) node	12
Bundle of His, bundle branches, and Purkinje myocytes	12
3 Physiological consequences of ionic mechanisms	15
Pacemaker hierarchy and latent pacemakers	15
Conduction velocity	16
Refractory period	17
Influence of extracellular K^+ concentration on the transmembrane potential (V_m) of ventricular and atrial myocytes	19
4 Control of heart rate	21
Parasympathetic	21
Sympathetic	21
5 Electrical properties and cardiac myocyte structure	23
6 Conduction of electrical activity in the heart	25
Gap junction function	25
Conduction sequence in the heart	25
7 Electrocardiogram	29
Overview	29
ECG waves	30
Standard lead system	31
Monitoring leads	35
Frontal plane vectors	35
Mean electrical axis	41
Precordial leads	41
ECG patterns of normal and abnormal heart conduction	42
ECG patterns of abnormal rhythms: Arrhythmias	49
Mechanisms of arrhythmias	52
SECTION II CARDIOVASCULAR SYSTEM	59
8 How the circulation works	61
Blood pressure	61
Energy	61
Flow	62

	Blood flow types	64
	Blood flow velocity in the circulation	67
	Clinical significance	67
9	Cardiac cycle, heart sounds, and murmurs	71
	The circulation	71
	Cardiac valves	71
	Atrial and ventricular phases of the cardiac cycle	71
	Normal intravascular pressures in people	75
	Heart sounds	75
	Murmurs during the cardiac cycle	78
10	Ventricular function	83
	Preload	83
	Contractility	85
	Afterload	88
	Examples of changes in ventricular function	90
	Ejection fraction	91
	Passive (diastolic) pressure-volume relation	91
	Control of the heart <i>in vivo</i> : A study summary	93
11	Peripheral circulation	
	Mean arterial pressure and pulse pressure	95
	Resistance	100
	Blood volume distribution	103
12	Circulatory controls	105
	Introduction	105
	Arterial neural baroreceptors	105
	Hormonal controls	109
	Chemoreceptors	116
	Local metabolic control	116
	Autoregulation	117
	Arterial blood pressure and salt and water metabolism	119
	Veins in circulatory control	119
	Blood pressure control, the autonomic nervous system, and heart failure	120
13	Regional blood flow	121
	Introduction	121
	Cerebral blood flow	121
	Coronary blood flow	124
	Skeletal muscle blood flow	129
	Pulmonary blood flow	130
	Renal blood flow	132
	Gastrointestinal blood flow	132
	Cutaneous blood flow	132
14	Microcirculation	135
	Arterioles	135
	Capillaries	135
	Metarterioles	135
	Postcapillary resistance	136
	Nature of blood flow in the microcirculation	136
	References for additional reading	143
	Index	145
