

Contents

<i>Preface</i>	v
<i>Acknowledgements</i>	vii
	1
1 Energy Situation and Renewable Energy Sources	
1.1 Global energy scene	1
1.2 World energy consumption	1
1.3 Energy in developing countries	4
1.4 Firewood crisis	6
1.5 Indian energy scene	7
1.6 Non-conventional renewable energy sources	10
1.7 Potential of renewable energy sources	12
References	32
	33
2 Solar Radiation	
2.1 Extra terrestrial radiation	33
2.2 Terrestrial solar radiation	38
2.3 Measurement of solar radiation	49
2.4 Summary of global solar radiation on a horizontal surface and that on an inclined surface	53
References	54
	55
3 Low Temperature Collectors	
3.1 Flat plate collectors	55
3.2 The optical characteristics of the absorber and the cover	58
3.3 Heat transfer in the absorber of a collector	61
3.4 Transmission losses in the cover of the collector	62
3.5 The HWB collector model	67
3.6 Comparison of three collector equations	70
References	74
	75
4 Low Temperature Applications of Solar Energy	
4.1 Swimming pool heating	75
4.2 Solar hot water	94
4.3 Solar drying	111
4.4 Solar distillation	123
4.5 Solar pond	126
References	127
	128
5 Heat Pump and Solar Refrigerator	
5.1 Introduction	128
5.2 Heat pump	130
5.3 Solar airconditioning and refrigeration	145
References	149
	150
6 Passive Space Conditioning	

6.1	Thermal comfort	150	
6.2	Solar passive conditioning	152	
6.3	Physical concepts	152	
6.4	Passive building concepts	163	
	References	186	
7	Concentrating Collectors		188
7.1	Introduction	188	
7.2	Parabolic concentrator	188	
7.3	Construction of a concentration collector	190	
7.4	Maximum concentration ratio and maximum temperature	193	
7.5	Energy losses in a concentrating collector	199	
7.6	Useful power and efficiency	204	
7.7	Comparison of a concentrating and flat plate collector	206	
7.8	Transfer of useful power in the heat transfer fluid	207	
	References	211	
8	Solar Thermal Power Generation		212
8.1	Thermal and direct electricity generation	212	
8.2	Major sub-systems of a solar thermal power plant	212	
8.3	Examples of installed systems	214	
8.4	Concentration ratio, temperature and efficiency	219	
8.5	Solar farm concept	220	
8.6	Solar tower concept	231	
8.7	Economics	244	
	References	248	
9	Photovoltaic Energy Conversion		249
9.1	Introduction	249	
9.2	Fundamentals	249	
9.3	Solar cell modules	260	
9.4	Equivalent circuit diagram of solar cells	265	
9.5	Silicon solar cells	266	
9.6	Copper sulphate/cadmium sulphide ($\text{Cu}_2\text{S}/\text{CdS}$) solar cells	270	
9.7	Other materials	271	
9.8	Solar cell systems	276	
	References	279	
10	Physical and Thermochemical Methods of Bioconversion		280
10.1	Introduction	280	
10.2	Biomass: definition and potential	282	
10.3	Physical methods of bioconversion	287	
10.4	Thermochemical methods	289	
10.5	Conclusions	306	
	References	307	

11	Biological Methods for Bioconversion	309
11.1	Important biological methods	309
11.2	Basic biology of methane production: A historical view	309
11.3	Ethanol production	334
	References	342
12	Wind Energy	343
12.1	Origin of wind and general circulation system of earth	343
12.2	Wind direction	349
12.3	Wind velocity	350
12.4	Wind measurements	362
	References	368
13	Wind Energy Converters	369
13.1	Historical development	369
13.2	Power coefficient	373
13.3	Aerodynamic construction of a rotor blade	380
13.4	Darrieus rotor	395
13.5	Growian	397
13.6	Wind electric generators in India	400
13.7	Economics of wind farm	402
	References	405
14	Wave, Tidal and OTEC	406
14.1	Introduction	406
14.2	Wave energy	406
14.3	Tidal energy	413
14.4	Ocean thermal energy conversion (OTEC)	419
	References	436
	Appendix I	438
	Appendix II	439
	Appendix III	450
	Index	453
