<i>Foreword</i>	vii
<i>List of Tables</i>	xxi
<i>List of Figures</i>	xxiii
<i>About the Authors</i>	xxix
Chapter 1. Introduction	1
1.1 Definition and Development of Artificial Intelligence	2
1.1.1 Definition of artificial intelligence	3
1.1.2 Origin and development of artificial intelligence	5
1.2 Classification of Artificial Intelligence Systems	14
1.3 Research Objectives and Contents of Artificial Intelligence	19
1.3.1 Research objectives of artificial intelligence	19
1.3.2 Research and application fields of artificial intelligence	20
1.4 Core Elements of Artificial Intelligence	25
1.5 Outline of the Book	27
References	29
Part 1: Knowledge-based Artificial Intelligence	33
Chapter 2. Knowledge Representation	35
2.1 State Space Representation	36
2.1.1 Problem state space description	36
2.1.2 Graph theory terminology and graphic method . . .	38
2.1.3 Problem reduction representation	40

2.2	Knowledge Base	44
2.2.1	Definition and characteristics of knowledge base	45
2.2.2	Design and application of knowledge base	46
2.3	Ontology	48
2.3.1	Concept and definition of ontology	48
2.3.2	Composition and classification of ontology	52
2.3.3	Ontology modeling	53
2.4	Semantic Network Representation	56
2.4.1	Composition and characteristics of the semantic network	56
2.4.2	Representation of a binary semantic network	57
2.4.3	Representation of a multi-element semantic network	59
2.4.4	Inference process of a semantic network	60
2.5	Knowledge Graph	61
2.5.1	Definition and architecture of knowledge graph	62
2.5.2	Key technologies of knowledge graph	64
2.6	Frame Representation	70
2.6.1	Frame composition	70
2.6.2	Frame reasoning	73
2.7	Predicate Logic Representation	75
2.7.1	Predicate calculus	76
2.7.2	Predicate formula	79
2.8	Summary	81
	References	83
Chapter 3.	Knowledge Search and Reasoning	85
3.1	Graph Search Strategy	85
3.2	Blind Search	88
3.2.1	Breadth-first search	88
3.2.2	Depth-first search	90
3.2.3	Uniform cost search	90
3.3	Heuristic Search	91
3.3.1	Heuristic search strategy and valuation function	92
3.3.2	Ordered search	93
3.3.3	Algorithm A*	96

3.4	Resolution Principles	99
3.4.1	Extraction of the clause set	99
3.4.2	Rules of resolution reasoning	102
3.4.3	Solving process of resolution refutation	102
3.5	Rule Deduction System	104
3.5.1	Rule forward deduction system	105
3.5.2	Rule reverse deduction system	111
3.5.3	Rule bidirectional deduction system	114
3.6	Reasoning with Uncertainty	117
3.6.1	Representation and measurement of uncertainty	118
3.6.2	Algorithm of uncertainty	119
3.7	Probabilistic Reasoning	121
3.7.1	Basic properties and computing formulas of probability	122
3.7.2	Method of probabilistic reasoning	124
3.8	Subjective Bayesian Method	126
3.8.1	Representation about knowledge uncertainty	127
3.8.2	Representation about evidence uncertainty	128
3.8.3	Reasoning procedure of the subjective Bayesian method	131
3.9	Summary	132
	References	135
Chapter 4.	Knowledge-Based Machine Learning	137
4.1	Definition and Development of Machine Learning	137
4.1.1	Definition of machine learning	137
4.1.2	Development history of machine learning	141
4.2	Main Strategies and Basic Structure of Machine Learning	146
4.2.1	Main strategies of machine learning	146
4.2.2	Basic structure of the machine learning system	148
4.3	Inductive Learning	151
4.3.1	Modes and rules of inductive learning	151
4.3.2	Example-based learning	155
4.3.3	Learning from observation and discovery	157

4.4	Learning by Explanation	158
4.4.1	Process and algorithm of explanatory learning	158
4.4.2	Example of explanatory learning	160
4.5	Learning by Analogy	162
4.5.1	Analogy inference and form of analogy learning	162
4.5.2	Process and research type of analogy learning	164
4.6	Reinforcement Learning	166
4.6.1	Overview of reinforcement learning	166
4.6.2	Q-learning	170
4.7	Summary	171
	References	173

Part 2: Data-based Artificial Intelligence 175

Chapter 5. Neural Computation 177

5.1	Overview of Computational Intelligence	178
5.2	Research Advances in Artificial Neural Networks	180
5.3	Basic Structure of Artificial Neural Network	182
5.3.1	Neuron and its characteristics	183
5.3.2	Basic characteristics and structure of ANN	184
5.3.3	Main learning algorithms of ANN	186
5.4	Deep Neural Networks	187
5.4.1	Brief introduction to DNNs	187
5.4.2	Common models of deep neural network	189
5.4.3	Structure analysis of convolutional neural network	198
5.5	Summary	201
	References	202

Chapter 6. Evolutionary Computation 207

6.1	Evolutionary Algorithms (EAs)	208
6.1.1	The basic idea of EAs	208
6.1.2	The research areas and paradigms of EAs	209

6.2	Solving Constrained Optimization Problems by Evolutionary Algorithms	213
6.2.1	Constrained optimization problems (COPs) and constraint-handling techniques	213
6.2.2	Further analysis of the methods based on multi-objective optimization techniques	215
6.2.3	A multi-objective optimization-based EA for COPs	216
6.3	Solving Multi-objective Optimization Problems by Evolutionary Algorithms	223
6.3.1	Multi-objective optimization problems (MOPs) and the related definitions	223
6.3.2	A regularity model-based multi-objective estimation of distribution algorithm (RM-MEDA)	224
6.3.3	The drawback of modeling in RM-MEDA	227
6.3.4	An improved RM-MEDA (IRM-MEDA)	231
6.3.5	Experimental study	233
6.4	An Application of EA for Descriptor Selection in Quantitative Structure–Activity/Property Relationship (QSAR/QSPR)	239
6.4.1	Background	239
6.4.2	Weighted sampling PSO-PLS (WS-PSO-PLS)	240
6.4.3	Experimental study	244
6.5	Summary	249
	References	249
	Chapter 7. Data-based Machine Learning 255	
7.1	Linear Regression	255
7.2	Decision Tree	258
7.2.1	Decision tree model and learning	258
7.2.2	Feature selection	259
7.2.3	Generation algorithm of decision trees	263
7.2.4	Pruning of decision trees	263
7.3	Support Vector Machine	265
7.3.1	Intervals and support vectors	265
7.3.2	Duality problem	267
7.3.3	Soft interval and regularization	269
7.3.4	Kernel function	273

7.4	Integrated Learning	276
7.4.1	Random forest	276
7.4.2	Adaboost algorithm	278
7.5	Clustering	283
7.5.1	Distance calculation	283
7.5.2	The k-means clustering	284
7.5.3	Sample description	284
7.6	Deep Learning	286
7.6.1	Definition and characteristics of deep learning	287
7.6.2	Deep learning model training and optimization	288
7.6.3	Applications of deep learning	294
7.7	Summary	297
	References	298

Part 3: Application Examples of Artificial Intelligence 301

Chapter 8. Expert System	303
8.1 Overview of Expert Systems	303
8.1.1 Definition, characteristics, and types of expert systems	303
8.1.2 Structure and construction steps of expert systems	306
8.2 Rule-based Expert System	310
8.2.1 Working model and architecture of a rule-based expert system	310
8.2.2 Features of a rule-based expert system	312
8.3 Model-based Expert System	314
8.3.1 Proposal of a model-based expert system	315
8.3.2 Expert system based on neural networks	315
8.4 Web-based Expert System	318
8.4.1 Structure of the Web-based expert system	318
8.4.2 Example of a Web-based expert system	322
8.5 Design of the Expert System	323
8.6 Expert Systems Based on Machine Learning	325
8.6.1 Introduction to expert systems based on machine learning	326

8.6.2	Example of expert systems based on deep learning	328
8.7	Summary	333
	References	334
Chapter 9. Intelligent Planning		339
9.1	Overview of Intelligent Planning	339
9.1.1	Concept and function of planning	340
9.1.2	Classification of planning	342
9.2	Task Planning	344
9.2.1	Robot planning in the block world	344
9.2.2	Task planning based on the resolution principle	348
9.3	Planning System with Learning Ability	355
9.3.1	Structure and operation modes of the PULP-I system	355
9.3.2	World model and planning results of the PULP-I system	357
9.4	Planning Based on Expert Systems	359
9.4.1	Structure and planning mechanism of the system	359
9.4.2	ROPES robot planning system	361
9.5	Path Planning	366
9.5.1	Main methods of robot path planning	367
9.5.2	Development trends of path planning	369
9.6	Robot Path Planning Based on Ant Colony Algorithm	370
9.6.1	Introduction to the ant colony optimization algorithm	371
9.6.2	Path planning based on ant colony algorithm	373
9.7	Intelligent Planning Based on Machine Learning	379
9.7.1	Advances in intelligent planning based on machine learning	379
9.7.2	Autonomous path planning based on deep reinforcement learning for unmanned ships	382
9.8	Conclusion	387
9.9	Summary	388
	References	389

Chapter 10. Intelligent Perception	395
10.1 Introduction to Pattern Recognition	395
10.1.1 What is pattern recognition?	395
10.1.2 The difference between pattern recognition and machine learning	396
10.1.3 Research methods of pattern recognition	397
10.2 Image Analysis and Understanding	399
10.2.1 Image engineering	399
10.2.2 Image processing and image analysis	401
10.2.3 Image understanding	405
10.3 The Case of Image Understanding Based on Deep Learning: DenseCap	413
10.4 Basic Principles and Development of Speech Recognition	414
10.4.1 How does speech recognition work?	415
10.4.2 Development of speech recognition	417
10.5 Key Technologies of Speech Recognition	419
10.5.1 Acoustic feature extraction	419
10.5.2 Acoustic model	422
10.5.3 Language model	424
10.5.4 Search algorithms in speech recognition	425
10.5.5 Performance evaluation	426
10.5.6 Outlook of speech recognition technology	427
10.6 Case of Speech Recognition Based on Deep Learning: Deep Speech	429
10.7 Summary	429
References	430
Chapter 11. Natural Language Understanding	433
11.1 Overview of Natural Language Understanding	433
11.1.1 Language and language understanding	434
11.1.2 Concept and definitions of natural language processing	436
11.1.3 Research areas and significance of natural language processing	437

11.1.4 Basic methods and advances in research on natural language understanding	441
11.1.5 Levels of the natural language understanding process	448
11.2 Lexical Analysis	450
11.3 Syntactic Analysis	452
11.3.1 Phrase structure grammar	452
11.3.2 Chomsky's formal grammar	454
11.3.3 Transition network	456
11.3.4 Lexical functional grammar	458
11.4 Semantic Analysis	460
11.5 Automatic Understanding of Sentences	463
11.5.1 Understanding of simple sentences	463
11.5.2 Understanding of complex sentences	466
11.6 Corpus Linguistics	468
11.7 Main Models of Natural Language Understanding Systems	471
11.8 Natural Language Processing Based on Deep Learning	474
11.8.1 Overview of deep learning-based natural language processing technologies	475
11.8.2 Natural language processing example based on deep learning	482
11.9 Summary	485
References	487
Chapter 12. Prospects of Artificial Intelligence	493
12.1 The Impact of Artificial Intelligence on Humans	494
12.1.1 Great benefits of artificial intelligence	494
12.1.2 Security issues of artificial intelligence	497
12.2 Deep Fusion of Artificial Intelligence Technology	502
12.2.1 Fusion of artificial intelligence technology in machine learning	502
12.2.2 Fusion of AI technology in deep reinforcement learning	503
12.2.3 Fusion of deep learning and traditional artificial intelligence technology	505

12.3	Industrialization of Artificial Intelligence	506
12.3.1	Current status of AI industrialization	506
12.3.2	Development trend of AI industrialization	508
	References	512
	<i>Epilogue</i>	515
	<i>Index</i>	517
