

CONTENTS

1	Rules of the Road (Axiomatic Systems)	1
1.1	Introduction	1
	Thales of Miletus	2
	Pythagoras	2
	Plato	3
	Euclid	3
	Exercise Set 1.1	4
1.2	Axiomatic Systems and Their Properties	5
	The Axiomatic Method	5
	Models	8
	Properties of Axiomatic Systems	12
	Exercise Set 1.2	14
1.3	Finite Geometries	15
	Four-Point Geometry	16
	The Geometries of Fano and Young	18
	Exercise Set 1.3	21
1.4	Axioms for Incidence Geometry	22
	Exercise Set 1.4	25
2	Many Ways to Go (Axiom Sets for Geometry)	27
2.1	Introduction	27
2.2	Euclid's Geometry and Euclid's <i>Elements</i>	28
	Exercise Set 2.2	36

2.3	An Introduction to Modern Euclidean Geometries	37
	Exercise Set 2.3	38
2.4	Hilbert's Model for Euclidean Geometry	39
	Exercise Set 2.4	45
2.5	Birkhoff's Model for Euclidean Geometry	47
	Exercise Set 2.5	49
2.6	The SMSG Postulates for Euclidean Geometry	50
	Exercise Set 2.6	56
2.7	Non-Euclidean Geometries	56
	Exercise Set 2.7	63
3	Traveling Together (Neutral Geometry)	65
3.1	Introduction	65
3.2	Preliminary Notions	66
	Exercise Set 3.2	70
3.3	Congruence Conditions	71
	Exercise Set 3.3	75
3.4	The Place of Parallels	76
	Exercise Set 3.4	82
3.5	Saccheri-Legendre Theorem	82
	Exercise Set 3.5	85
3.6	The Search for a Rectangle	85
	Exercise Set 3.6	92
	Chapter Three Summary	94
4	One Way to Go (Euclidean Geometry of the Plane)	98
4.1	Introduction	98
4.2	The Parallel Postulate (and Some Implications)	99
	Exercise Set 4.2	106
4.3	Congruence and Area	107
	Exercise Set 4.3	110
4.4	Similarity	111
	Exercise Set 4.4	119
4.5	Some Euclidean Results Concerning Circles	120
	Exercise Set 4.5	126
4.6	More Euclidean Results Concerning Circles	127
	Exercise Set 4.6	143
4.7	Some Euclidean Results Concerning Triangles	144
	Exercise Set 4.7	156
4.8	The Nine-Point Circle	158
	Exercise Set 4.8	160

4.9	Euclidean Constructions	162
	Exercise Set 4.9	173
	Chapter 4 Summary	177
5	Side Trips (Analytic and Transformational Geometry)	185
5.1	Introduction	185
5.2	Analytic Geometry	186
	Historical Perspectives	186
	Coordinatization of the Plane	187
	Distance in the Plane	188
	Analytic Equations of Straight Lines and Circles	190
	Applications of Analytical Geometry	193
	Exercise Set 5.2	198
5.3	Transformational Geometry	199
	Introduction	199
	Mappings and Transformations	199
	Isometries	201
	Applications of Isometries to Theorem Proving	209
	Similarities and Their Applications to Theorem Proving	214
	Exercise Set 5.3	219
5.4	Analytic Transformations	225
	Introduction	225
	Analytical Equations for Isometries	226
	Analytical Equations for Similarities	230
	Applications of Isometries and Similarities Using Analytical Transformations	232
	Exercise Set 5.4	235
5.5	Inversion	237
	Introduction	237
	Inversion in a Circle	237
	Exercise Set 5.5	244
	Chapter 5 Summary	245
6	Other Ways to Go (Non-Euclidean Geometries)	251
6.1	Introduction	251
6.2	A Return to Neutral Geometry—The Angle of Parallelism	252
	Exercise Set 6.2	257
6.3	The Hyperbolic Parallel Postulate	258
	Exercise Set 6.3	265
6.4	Some Hyperbolic Results Concerning Polygons	267
	Exercise Set 6.4	281

6.5	Area in Hyperbolic Geometry	282
	Exercise Set 6.5	287
6.6	Showing Consistency—A Model for Hyperbolic Geometry	287
	Exercise Set 6.6	307
6.7	Classifying Theorems	310
	Exercise Set 6.7	316
6.8	Elliptic Geometry	318
	A Geometry With No Parallels?	318
	Two Models	319
	Some Results in Elliptic Geometry	322
	Exercise Set 6.8	326
6.9	Geometry in the Real World	326
	Chapter 6 Summary	330
7	All Roads Lead To . . . (Projective Geometry)	335
7.1	Introduction	335
7.2	The Real Projective Plane	337
	Exercise Set 7.2	343
7.3	Duality	344
	Exercise Set 7.3	348
7.4	Perspectivity	349
	Exercise Set 7.4	353
7.5	Theorem of Desargues	354
	Exercise Set 7.5	360
7.6	Projective Transformations	361
	Exercise Set 7.6	364
	Chapter 7 Summary	365
	Appendix A: Euclid's Axioms	368
	Appendix B: Hilbert's Axioms for Euclidean Geometry	371
	Appendix C: Birkhoff's Axioms for Euclidean Geometry	374
	Appendix D: MSG's Axioms for Euclidean Geometry	376
	Bibliography	379
